DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Att. Kempler on March 14, 2005.

The application has been amended as follows:

In the claims

In claim 7, line 1, after "detector", insert – further --.

In claim 8, line 1, after "detector", insert – further --.

In claim 11,

line 11, before "inductance", replace "the" (second occurrence) with – an --;

line 12, before "BVdss" replace "the" with – a --;

line 13, after "gate", replace ", the" with – providing a --.

In claim 17, line 2, before "resistor", insert – the --; and before "first", insert – the -

Cancel claim 18.

In claim 19, last line, replace "the" with – a --.

Reasons for allowance

The following is an examiner's statement of reasons for allowance:

The present invention is drawn to an FET switch having a clamp circuit utilizing an FET switching transistor, a surge detector having means for enabling, a first biasing circuit, a second biasing circuit, a biasing switching circuit, or a reverse voltage breakdown diode and a series resistor, a detector, a first biasing current source, a second biasing current source, a biasing current switching circuit recited in claims 1-17, 19-20. None of the prior art disclosed or suggested to show the particular structure and/or the particular operation recited in these claims namely: **“the second biasing current ... less than the first biasing current”** and **“the biasing switching circuit ... to clamp the surge voltage below the BV_{dss} thereof”** in combination with “the FET switching transistor”, “the surge detector” and “the first biasing circuit” as recited in claim 1; **“the detector”**, **“the first biasing current source”**, **“the second biasing current source”**, **“the biasing current switching circuit”** in combination with “the FET switching transistor” and “the reverse voltage breakdown diode and the series resistor” as recited in claim 11; **“the first switchable current source”** and **“the second current source”** in combination with “the reverse breakdown diode and the resistor” and “the surge detector” as recited in claim 19.

The prior art reference submitted by the applicant on IDS form received on 3/10/04 was reviewed and considered. This reference (U.S Patent No. 6,169,439) appears to be the best reference with respect to the claimed invention and closely matched with the reference found during the examiner's searches. However, as noted above, this reference also lacks at least one limitation: i.e., **“the biasing switching circuit”** (claim 1); **“the series resistor”**, **“the first biasing current source”**, **“the**

biasing current switching circuit" (claim 11); **"the first switchable current source"** and **"the second current source"** (claim 19). Therefore, the claims are patentably distinct over this prior art reference of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
